To Whom It May Concern:

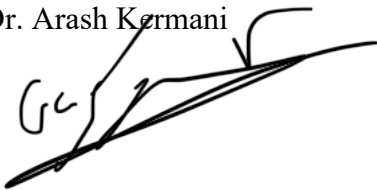

I have been the instructor of Ms. ZouZou in the courses: Database Management Systems, Artificial Intelligence and Computability and Complexity (Theory of Computation). I have also been the co-supervisor of her Graduation Project. In all courses, she shone by the speed of learning, engagement, commitment, accuracy and politeness. In her graduation project she was a good team worker and creative researcher and developer. I affirm her ability of theoretical and mathematical analysis and her software development skills.

Hala is strong in both understanding the fundamentals of the computer science and in keeping up with new and revolutionary trends such as AI in general, large language models, and methods like Reinforcement Learning.

Ms. ZouZou has big goals, and I am happy that she is approaching them by continuing her education. I recommend her to any academic or industrial organization where her software development, mathematical and specifically AI related skills could be utilized.

Sincerely yours,

Dr. Arash Kermani
